Expanded
Carrier
Screening

Noninvasive
Prenatal
Screening

Quest Diagnostics® is your comprehensive Women's Health prenatal genetic screening and diagnostic resource

Providing clear results to help patients understand genetic risks so you can help them make informed decisions every step of their journey.

QHerit® Expanded Carrier Screening

For patients either considering pregnancy or already pregnant, a pan-ethnic panel of tests aligned with professional society guidelines and advocacy groups is ideal to determine carrier risks of inherited genetic diseases.

- Starts with a safe and simple blood draw

- Clinically relevant results that harness the power of next-generation sequencing and a robust ever-growing genomics database

- The **No Surprise** patient assistance program determines prior authorization requirements and patient coverage

QNatal® Advanced Noninvasive Prenatal Screening

For pregnant patients, a low-risk, noninvasive cfDNA prenatal screening that can detect the most common fetal aneuploidies, including Down syndrome.

- Simple maternal blood draw performed as early as 10 weeks into the pregnancy

- High sensitivity and specificity with results reported clearly as positive or negative, in a concise, easy-to-read report

- The interactive **Cost Estimator** provides an estimated out-of-pocket responsibility in a few seconds to give patients an idea of what they might owe

Find the Cost Estimator at

All diagnostic laboratory tests are subject to various confounders that can affect the specificity and sensitivity of the test (the test's accuracy). The accuracy of any diagnostic test is validated under strict criteria intended to help control variables, but can never be 100% accurate in all cases.
